# THE STEM CELL SOLUTION

Stem cells are undifferentiated regenerative cells that develop into whatever specific cells the body requires. Stem cells are the only cells in the human body that have the ability to generate new cell types, and can become any one of 220 different cells. These can repair and heal organ tissue beyond imagination, therefore this therapy may be used in any number of medical protocols. Sleep disorders however reduce their efficacy.

Possible protocols include treatments for:

- Brain
- Lungs
- Heart
- Liver
- Kidneys
- Joints-Knees
- Diabetes
- Skin-Cosmetic and Non-Cosmetic applications
